PushRead: A New App that Helps You Read Pushed Web Articles

BOOX V3.0 Firmware Feature Introduction Part 4

PushRead

V3.0 Firmware New Feature

PushRead

BOOX

Pushing ebooks, files and web articles to read them later on BOOX is a great way to get rid of the LCD screens' blue light and get evolved in a comfortable reading experience.

9

3

Before the latest V3.0 firmware, users can push all kinds of documents and web posts to their BOOX tablets through push.boox.com.

For web articles, they will be converted into epub files. You can open them in NeoReader, and take notes on them like you're annotating an ebook.

Send in web url in the “Push” box in push.boox.com and get an epub version

However, this method can't convert protected data of the original web page. Some texts and graphics will disappear from the converted web articles, resulting in a strange format or even a blank document.

Since the latest firmware, we've developed a new built-in app named **PushRead** to help users read pushed web articles on BOOX better.

You may want to jump to a specific section:

-[PushRead App vs. Conventional Push Method](#)

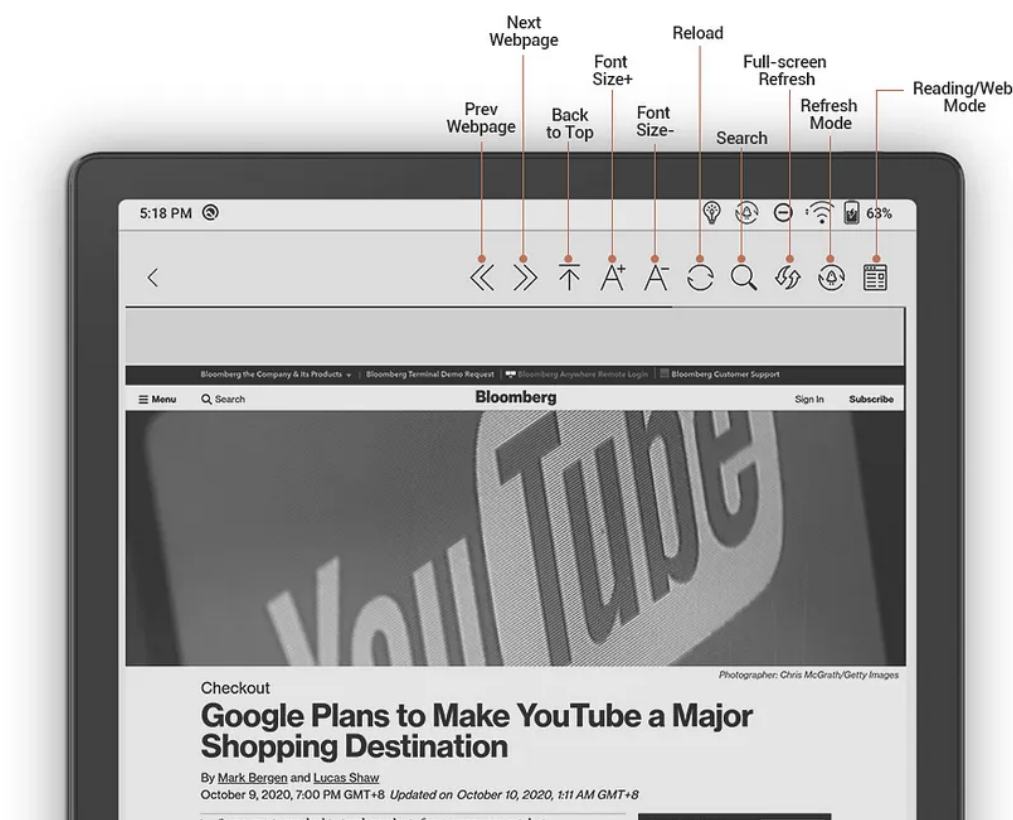

-[How to Push Articles to PushRead](#)

-[Heads-up! Here're two important tips.](#)

PushRead vs. Converted ePub Files

PushRead can save the majority of the pushed content. This is its most significant advantage when compared to the conventional conversion method.

Unlike the converted articles in the epub format, PushRead actually **remains the original format of a web article** to save as much information. It offers you a similar user interface and reading mode of a web browser. You can scroll up and down to read content without loading.

Top bar of PushRead

PushRead is even better than a regular web browser. Like our new NeoBrowser, it offers you several options to optimize the article reads on an E Ink device.

You can adjust the font size by a tap, search for words, and change the refresh mode from normal mode, speed mode to A2 mode.

You can also read with the built-in **Reading Mode**, which gives you **pure texts** without interruption from ads and pics.

Get rid of pics and ads in the reading mode

Long-pressing a word, you can **copy**, **share**, **translate** it and look it up in the built-in/custom dictionaries and third-party dictionary pop-ups.

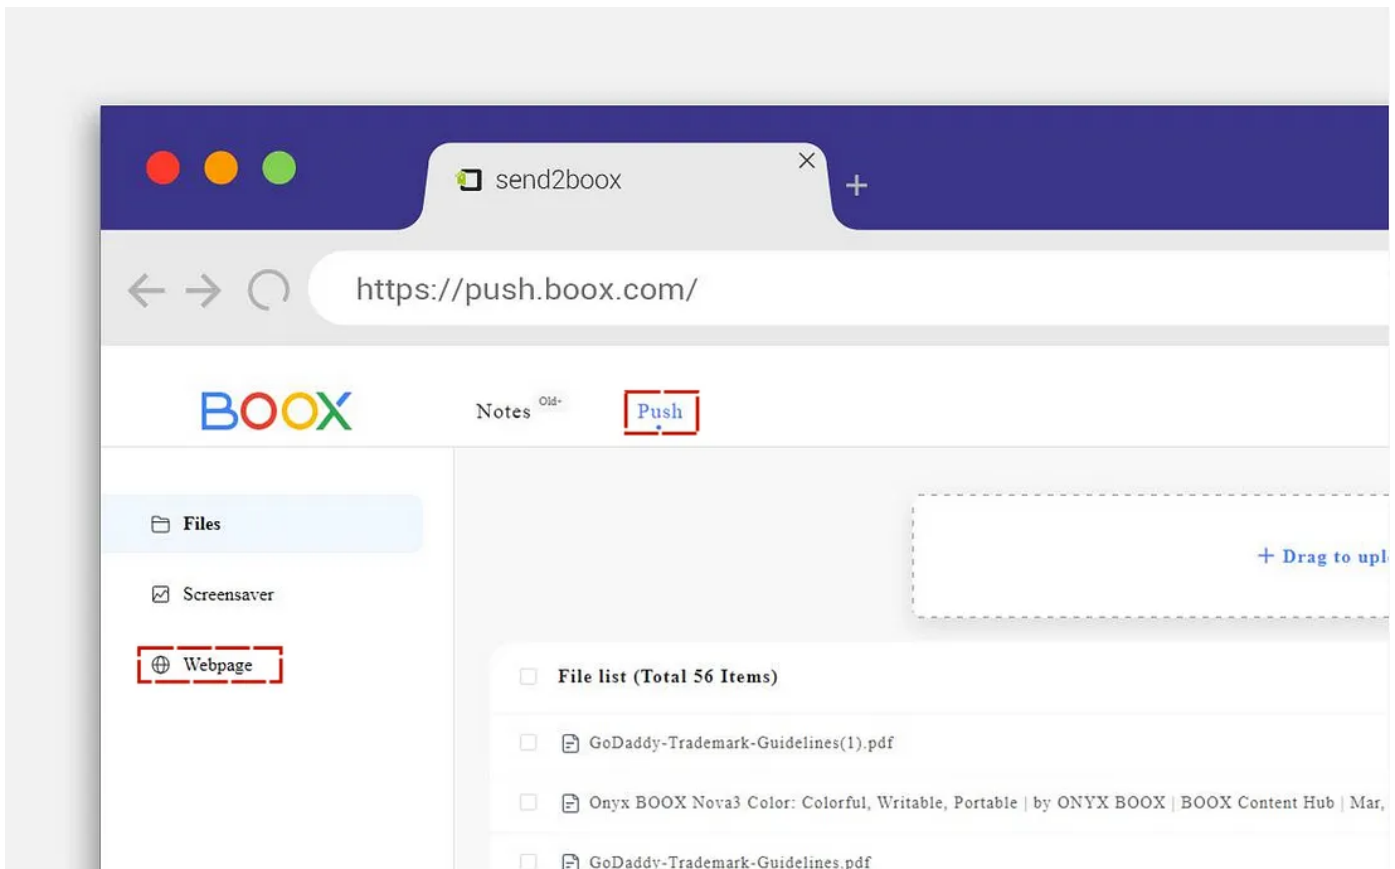

One thing that worths notice is that it doesn't support annotations and hand-written notes currently. If you want to take notes on the pushed articles, you need to go with the converted-to-epub articles and achieve that purpose with NeoReader.

What does it do then?!

Push Articles to PushRead

Pushing web posts to PushRead shares the same website of sending files to your BOOX: push.boox.com. But the typed-in box is different.

For pushing articles to PushRead, you need to tap **“Push”** and **“Webpage”**, then type the URL in the box and click “add”.

Tab “Push>Webpage” and send in URL in the box.

While for pushing files, like ebooks and documents, to your BOOX device, the access remains **“Push>File.”** In the box under “File,” you can either send in a URL to convert the web article into an epub file so you can take notes on it, or push an ebook or a picture to your NeoReader.

Besides pushing files and webpages, you also push screensavers in the **“Screensaver”** tab. As the name suggests, it enables you to push screensaver pictures to your BOOX directly without the cable connection.

Heads-up! Here’re two important tips.

1. To use the PushRead for the first time, you need to bind the same ONYX account on the website push.boox.com and your BOOX;
2. You need to connect your BOOX with Wi-Fi to download the pushed URLs for the first time. After loading once, it can be read offline later.

Enjoy reading with the PushRead app:)

If you're new to BOOX products, you're welcome to join our [Facebook fans group](#) to learn the tips&skills of using BOOX tablets and what the veteran users love about BOOX

New BOOX products will be available at all our online shops. You can now [order Note3, Note Air, Nova3 and Poke3](#) at the [BOOX Shop](#) to get a full set of free accessories.
